

PRIVATE PARTICIPATION IN INFRASTRUCTURE RESEARCH GROUP

Note 95

October 2013

Infrastructure Policy Unit 2012 South Asia PPI Data Update

Investments in South Asia drop by 20 percent to pre-Global Financial Crisis levels

In 2012, 128 new infrastructure projects reached financial or contractual closure in low and middle income countries in the South Asia region (SAR) region: Bangladesh (7), India (106), Nepal (1), Pakistan (9), Sri Lanka (5). Total investment commitments (hereafter, *investment*) in all infrastructure projects reached US\$35.1 billion, of which US\$29.4 billion were investments in new projects, and \$5.7 billion were additional investments in existing projects. As compared to 2011 investment levels, total investments decreased by 20 percent in 2012 to levels seen before the global financial crisis. The year prior to 2011 was an exceptional year, with \$80.2 billion in investments in 2010 fueled by telecom licenses. South Asia attracted 19 percent of global PPI investments and was the second most active region after Latin America and the Caribbean. The number of transactions continued the upward trend started in 2008.^{1,2}

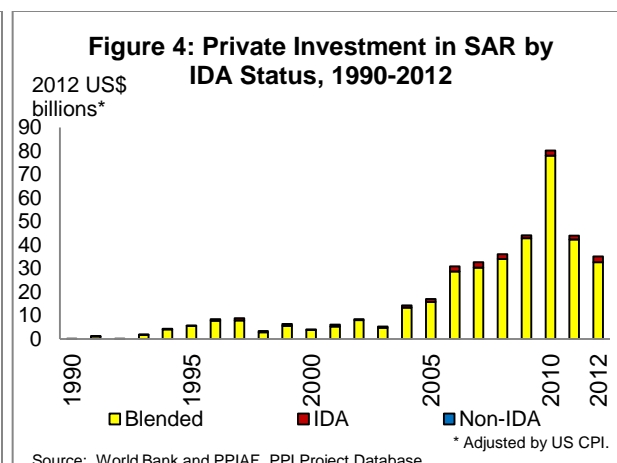

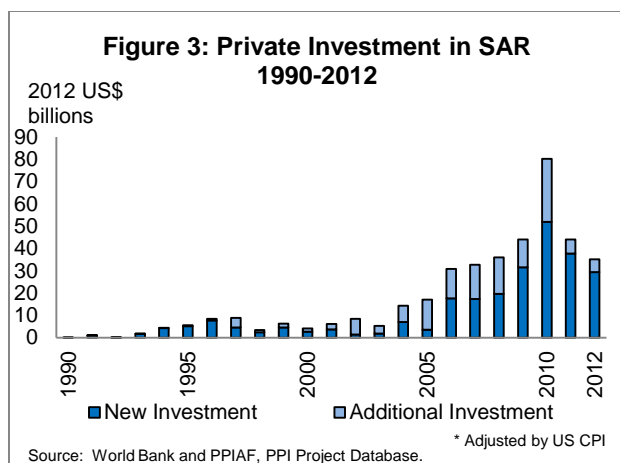

Despite the fall in investment in 2012, the year-on-year growth of private investment of 13.8 percent since 2002 outpaced regional GDP growth, at 6.5 percent. Private investment in 2012 comprised 1.5 percent of regional GDP. As in the past, India had the most regional investment with \$31.2 billion, of which \$18.9 billion in the transport sector.

This note was written by Bastiaan Johan Verink, Infrastructure Finance Analyst to the Private Participation in Infrastructure Research Group, Infrastructure Policy Unit, Sustainable Development Network, World Bank Group.

¹ The PPI Project Database currently uses the FY12 World Bank country classification released in July 2012. Investment data are in 2012 US dollar using the US CPI to adjust to 2012 values. Data at <http://ppi.worldbank.org/> are reported in millions of current U.S. dollars unless otherwise indicated. Investment data are in 2012 US dollars, using the US CPI to adjust to 2012 values.

² Data on projects with private participation include primarily medium-size and large projects in low and middle income countries as reported by media and other public sources. Small-scale projects are generally not included because of a lack of public information. More information is available at <http://ppi.worldbank.org/>.

Sector focus

In South Asia region, five countries implemented 67 new **energy** projects: Bangladesh (7); India (45); Nepal (1); Pakistan (9); and Sri Lanka (5). This represents a 12 percent decrease compared to 2011 activity levels. The investment amount in energy projects however, decreased by 43 percent, totaling \$11.4 billion. Of these projects, 63 were generation facilities which added 6.4GW, of which 53 projects were renewable energy projects, with a total capacity of 3.1GW. India added the largest generation capacity of 4.2GW to the grid through its 41 projects, the largest of which was the 1320MW Jas Infrastructure and Power coal plant. Bangladesh increased its generation capacity by 1.6GW with seven projects financially closed. Bangladesh' largest project was the 522MW Munshiganj Mawa Orion-Long King coal plant, which represented an investment of \$579 million. Pakistan expanded its generation capacity by 515MW, 356MW of which was due to the closure of seven wind farms backed by payment guarantees from the central government. Sri Lanka added 35MW to its grid. Nepal financially closed one project of 120MW with the Green Ventures Likhu IV hydropower plant.

Four transmission projects reached financial closure in India, totaling 3,753 kilometers for \$2.4 billion. The largest transmission project was the 1,290 kilometer Maharashtra Eastern Grid Power Transmission Company line awarded via direct negotiation for \$882 million. Existing energy projects added \$1.0 billion in investments.

No new **telecom** projects reached financial closure in 2012. However, 44 existing projects expanded their operations with additional investments of \$4.7 billion. Bharti Airtel in India made the largest additional investment of \$1235 million in 2012, lower than the largest investment in 2011 of \$1708 million by Vodafone Essar. Bharti Airtel accounted for 26 percent of the total recorded additional investment in existing telecom projects in the region, followed by Vodafone Essar (India), Uninor (India), and Idea Cellular (India), with investment sizes of \$973 million, \$777 million, and \$548 million respectively. The largest expansions outside of India involved GrameenPhone (Bangladesh) with \$181 million and Mobilink (Pakistan) with \$175 million.

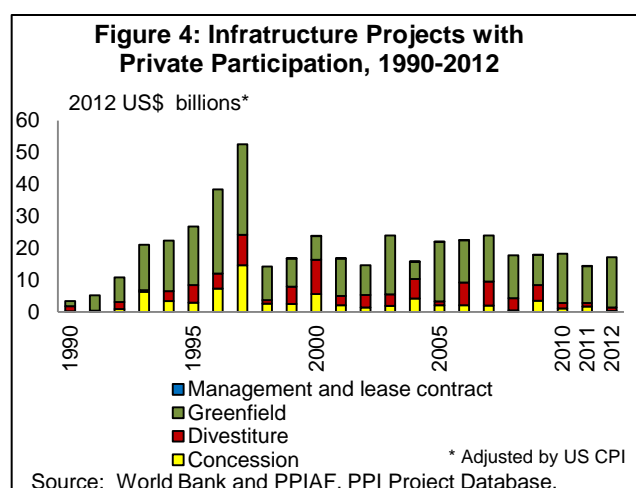

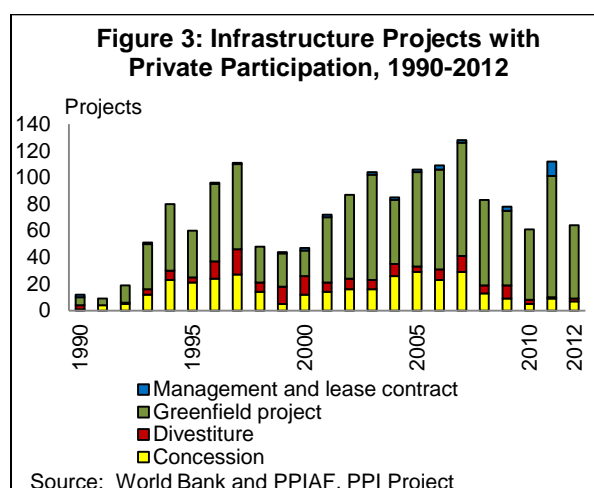

In the **transport** sector, 60 projects reached financial closure in 2012 with a total investment of \$18.9 billion, all of which were road projects in India. Two of these projects were greenfield contracts and the remaining 58 projects were brownfield concessions. The project with the largest amount of investment was the 556km GMR Kishangarh Udaipur Ahmedabad Expressway bid under Negative Viability Gap Funding (NVGF), with \$3.4 billion investment. This represented 18 percent of the total investments for new transport projects in 2012 in the region. Of this amount, \$1.8 billion involved payments by the concessionaire to the government and \$1.5 billion of expected capital expenditure. The 102 kilometer IRB Ahmedabad Vadodara Super Express Tollway ranked

second by investment size, with an investment commitment of \$1.8 billion, or 10 percent of the total investment for new transport projects in 2012. No existing projects had additional investment commitments.

In the **water and sewerage** sector, one new concession with a total investment of \$116 million closed in India: the Nagpur 24x7 Water Supply water utility project, with 450,000 connections. No existing projects had additional capital expenditures.

Contract Type

Greenfield contracts were the most common type of PPI in 2012, with 69 projects accounting for 54 percent of projects, followed by brownfield concessions (59 projects, 46%). No divestitures or management and lease contracts were recorded in 2012 which is in line with the global pattern. Of the 16 divestitures recorded in 2012, almost 88% took place in Europe and Central Asia. With regards to investment size, brownfield concessions were the most active type of PPI involving \$18.1 billion, followed by greenfield projects with \$11.4 billion.

Regional Outlook

In the South Asia region, investment levels in India have historically been a major component of regional investments. In India however, private developers have been dependent on state-owned banks for the majority of debt provision. In recent years, indebtedness in the infrastructure sector has been building and companies increasingly have difficulties servicing their obligations. After a period of credit expansion, the banking sector is approaching exposure limits to the asset class and faces increased levels of Non-Performing Assets (NPA). Meanwhile, the Indian Rupee has devalued approximately 30 percent in the past two years, putting additional pressure on foreign debt obligations. While the infrastructure deficit in the country remains a critical development challenge, other sources of finance will be needed to drive the expansion of infrastructure investments. Under the Twelfth Five-Year Plan (2012-2017), the government estimates an investment need of \$1000 billion, of which 47 percent is expected to come from private sources. This is an increase from 38 percent under the Eleventh Five-Year Plan, and 22 percent in the period before that. Tools to meet this demand include the promotion of non-recourse financing, project bond solutions and infrastructure debt funds, as well as improvements to the enabling environment and an increasing role for development banks. Together, the government aims to increase infrastructure investments from seven percent of GDP to nine percent in the coming years, with an increasing reliance on private capital. The IMF World Economic Outlook predicts GDP growth to recover from 3.8 percent in 2013 to an average of 6.3 percent between 2014 and 2018.

With over 300 projects in the pipeline, and a total value of \$90 billion, the state-owned infrastructure investment vehicle India Infrastructure Finance Company (IIFCL) is expected to play a central role. Expectations are that the infrastructure project pipeline of IIFCL will grow by more than 40 projects annually between 2014 and 2019. The Asian Development Bank is working towards extending a loan of \$700 million to the IIFCL in order to facilitate direct project lending. Another \$750 million is under negotiation with a consortium of the European Investment Bank, the French Development Agency and Japan International Corporation Agency. IIFCL was also authorized by the government to issue \$2 billion in tax free bonds. Investment priorities include power generation, roads, and the facilitation of transportation in an increasingly urbanized environment.

In Bangladesh, the priorities are in power generation, water and sanitation, and transportation services. Electricity has reached around 60 percent of the population, consuming on average 279kWh per year, one of the lowest consumption rates in the world. Still, the available generation capacity of 6500MW does not meet peak demand of 8000MW. In Pakistan, limited fiscal space, combined with substantial infrastructure needs are drivers favoring private participation in the sector. The International Finance Corporation is working with the governments of Punjab and Sindh to explore private participation in the infrastructure sector. Renewable energy generation projects including wind and hydropower may see continued investments, but coal plants and projects related to regional interconnectivity such as international highways may as well.

Featured project: IRB Ahmedabad Vadodara Super Expressway (India) | Concession (BROT) | 25 years

IRB Infrastructure Developers was awarded the 25 year concession of the Ahmedabad Vadodara Super Expressway in April 2011 by the National Highway Authority of India (NHAI). The section was part of NH-8, an existing four lane highway. Under the concession, the developer was expected to design and construct an additional two lanes as well as operate and maintain the project thereafter. The project was the first project of the Ultra Mega Highway Program, part of the National Highway Development Project Phase V to ease congestion in the region.

Contract Information

The special purpose vehicle IRB Ahmedabad Vadodara Super Express Tollway Private Limited won the competitive tender by quoting the highest premium payment to NHAI. The winning bid involved a sum of \$61.9 million for the first year of operations and agreed to escalate at 5 percent annually, adding up to a total amount of \$873 million over the life of the concession. In total, 22 bidders prequalified of which 13 submitted final bids. The bidder in second place quoted a premium 60 percent less. Under the contract, the concessionaire was allowed to recover capital and operation costs via tolling, subject to annual revisions linked to the Wholesale Price Index (WPI). The EPC contract was awarded to Modern Road Makers, the construction branch of IRBIDL. Construction was expected to start in January 2013 and commissioning was planned for December 2015.

Financial Information

Financial closure was reached in February 10th 2012. Under the arrangement, the project would have a debt-to-equity ratio of 68/32 with an expected capital cost of \$976 million. The debt comprised a INR 33 billion rupee denominated debt portion with a maturity of 18 years and a 12 month grace period to be repaid in 168 monthly installments. It was priced at 12.35%. The second tranche consisted of a \$100 million US dollar denominated loan priced at six month LIBOR+495bps following the rupee denominated repayment profile. The arranger was Bajaj Consultant. Participating banks were IDFC, Punjab National Bank, ICICI, Andhra Bank, Bank of India, Indian Overseas Bank, Union Bank of India, and IIFCL.

Table 1 - Projects with private participation reaching financial or contractual closure in the South Asia region in 2012.

Energy	Country	Project name	Project status	Segment	Type of PPI	Subtype of PPI	Investment commitment (US\$ millions)	Capacity type	Capacity	Sponsors
